Proposal put aside in Senate

Los Angeles Times

WASHINGTON—In the first major legislative setback for President Clinton, the Senate on Wednesday yielded to a Republican filibuster and abandoned his stimulus package, approving only \$4 billion to pay for extended unemployment benefits.

The outcome ends a standoff that the president's repeated attempts at compromise failed to resolve and it portends trouble ahead for other elements of Clinton's agenda, including his economic program, health care reform and aid to Russia.

It underscored the power of a united band of Republicans, outnumbered 57 to 43 by Democrats in the Senate, to stall legislation by using Senate rules that permit debate to continue indefinitely unless 60 senators vote to end it.

The Democrats fell four votes short on a 56-43 roll call, failing for the fourth time Wednesday to shut off

Alliance sweeps; bus passes

By Katie Morrison
Administration Writer

The Alliance Party presidential and vice presidential candidates won the Undergraduate Student Government elections, despite being disqualified earlier in the campaign.

Mike Spiwak of the Alliance Party won a landslide victory over incumbent Brad Cole, 1,876 to 695.

SIUC's new student trustee is Mark Kochan, with 1,306 votes. Al Cano of the Student Party followed with 874 votes and independent candidate Andrew Ensor trailed with 555.

The election drew more than 3,000 students this year, compared to only 1,325 voters last year.

"I feel outstanding and was impressed by the large turnout," Spiwak said. "I'd like to thank the students."

Students also supported overwhelmingly a \$20-a-semester fee increase for a mass transit service in Carbondale, 2,204 to 806. The proposal still has to be approved by the SIU Board of Trustees.

"This was the third referendum," said Dave Madlener, chairman of the Saluki Mass Transit Board and the Jackson County Mass Transit District. "More students voted yes this time than in 1986 and 1988, separately."

"There's a bright future for mass transit. USG is now action-oriented rather than complacent," Madlener

Students get their identification cards for Undergraduate Student Government were checked by election workers. The elections Wednesday at the Student Center.

said. "Success takes risks; you can't steal second base and keep your foot on first."

The Alliance Party swept the East Side, Spiwak said, with all seven of its candidates winning senate seats. The Student Party fared better on Greek Row,

Larry Johnson, a sophomore in history from Chicago, will represent Brush Towers on the senate. Johnson credited Spiwak for pulling him into the election.

Spiwak's original vice presidential candidate Yusuf Haqq did not meet election requirements,

resulting in both candidates' disqualification. But Spiwak appealed and was given a chance to find another vice presidential candidate, Lorenzo Henderson.

"He's motivated," Spiwak said of Henderson. "I know he's going to do a good job."

Cleanup at Crab Orchard planned for waste problem

By John Rezanka
Special Assignment Writer

When the War Department handed over 43,550 acres of land to the Department of the Interior and the U.S. Wildlife Service in 1947, it also handed over a legacy of hazardous wastes.

During World War II, industries in the area participated in the war effort by producing munitions, explosives and other products.

After the war, explosive production continued, and other industries were active. These included manufacturers of transformers and capacitors, fiberglass boats, corrugated boxes, plated metal parts, tapes, flares and jet engine starters.

The industries deposited waste in several areas of the Crab Orchard refuge, primarily in the eastern portion, and in the late 1970s tests indicated the presence of polychlorinated biphenyls (PCBs), lead, cadmium, chromium, arsenic and cyanide.

During the investigations the EPA discovered that industries had been disposing of heavy metals and PCBs, said Nan Gowda, the U.S. Environmental Protection Agency remedial project manager.

Further investigations identified three heavy metal sites and four PCB sites on the Refuge.

In 1984, the Refuge was added to the EPA National Priorities List of hazardous waste sites, and in 1987, Crab Orchard became the first national wildlife refuge to be named a Superfund site.

A Superfund site is a hazardous waste problem that is so serious it needs federal funding to take care of it.

Today, after years of testing and investigations, removal of some of the hazardous waste is about to begin.

Gowda said the time lapse between the discovery of the hazardous waste and the beginning of cleanup is not unusual and is

see CRAB, page 7

Crab Orchard cleanup units

The cleanup effort at Crab Orchard has been divided into five operable units because of the variety of hazardous waste problems.

Munitions

■ covers the residues left when the producers detonated and disposed of stock-piles of explosives and other materials after World War II

Metals

■ includes a plating pond, the fire station landfill and the old refuge shop

PCBs

■ left over from the manufacturing of electric capacitors that contained PCBs

Miscellaneous

■ consists of sites not identified in initial investigations

Water Towers

■ the water tower unit was formed after workers sand-blasted lead-based paint from the towers in Fall 1991 during routine maintenance.

City officials say Flanagan, Yow good picks for council

By Sanjay Seth
City Writer

Maggie Flanagan, who led all candidates with 1,148 votes, will become the fourth woman to sit on Carbondale City Council.

A total of 2,540 votes were cast in this year's city elections.

In unofficial returns, Flanagan led the polls with 1,148 followed very closely by incumbent John Yow with 1,147 votes.

John "Mike" Henry followed with 1,132 and incumbent Keith Tuxhorn had 1,038 votes.

This year's turnout was slightly less than two years ago when the votes totaled 2,140.

Mayor Neil Dillard said the results, being as close as they were, did not reveal any trend or message to him and the City Council.

"There were four outstanding candidates, and the campaign and results proved it was well-balanced," Dillard said. "The voters thought the candidates were good and there was no one factor or group of factors, I feel, that caused the outcome the way it did."

Helen Westberg was the first woman to serve, appointed to the council in 1973 to fill in a vacancy.

Westberg was elected as the first woman mayor in 1983.

Sammye Aikman was appointed to the council in 1981 and served for two years.

Aikman was quoted in the Daily Egyptian saying that she had a write-in campaign four days before the election because she was "disappointed that no women entered the race," although Westberg was running for mayor.

Susan Mitchell was another councilwoman who served a two-year term directly before Aikman.

Flanagan said she thought it was great timing and significant that she

Saluki guard Johnson leaves SIUC

By Karyn Viverito
Sports Writer

The SIUC men's basketball team got a go-go from freshman guard Jo Jo Johnson, but attending his classes was definitely a no-no.

A reliable source in the athletic department said Johnson has already packed up his bags and headed to his hometown in Benton because of his poor academic

performance at SIUC.

"He just did not attend his classes," the source said.

Johnson's poor academic performance could lead to

Johnson

him dropping or flunking out of SIUC, ultimately leading to his removal from the basketball team.

Johnson said he could not comment on why he has left or what his leaving means to his status on the team, until his status is made official with the University and Coach Rich Herrin.

Herrin said he has not received any official information from the

University that Johnson's status has changed.

Johnson came to SIUC after achieving star status while playing basketball at Benton High School where his 29.7 points and 10 rebound-a-game senior season led his winning Chicago Sun Times, Southern Illinoisan, and Evansville Courier player of the year honors.

Johnson averaged 13.5 minutes

a game his freshman year at SIUC, and averaged 4.9 points a game. He shot .307 from three-point land this season, in addition to his 61 rebounds, 24 assists, 31 turnovers and 33 steals.

If the official word is given, and Johnson is no longer at SIUC, a scholarship will be freed up on the team and will allow the Salukis to sign one more recruit. The signing deadline is in mid-May.

Bo proves everyone wrong one more time

The Baltimore Sun

Finished with his stretching exercises, finished with his jogging, finished with his game of soft toss, Bo Jackson headed for the dugout.

A battery of notebooks and minicams followed, gathering in a knot around Bo as he took a seat on the bench.

This is how Bo wants it as he makes his first tour around the American League as the medical miracle: a quick group interview before the first game in a new town, the assumption being that he will be left alone after that.

Left alone to be just another ballplayer, which he wants to be and never will.

"Five minutes, people," a White Sox official shouted after everyone had jostled into position.

There was an awkward moment of silence waiting for someone to volunteer the first question. Bo finally spoke up.

"No, no, no, no, yes, no, yes, yes, no," he said.

He knew all the answers. Knew all the questions. Knew them before they were asked. How could he not? The questions don't change from city to city. How's the hip feel, Bo? Any pain, Bo? How hard'd you work, Bo? How'd you do it, Bo? Really, how?

It's funny. He's a bit player on a talented young club with several major stars, and baseball's code of conduct frowns on such reservists stealing much pub. But baseball's code of conduct never counted on an artificial hip making the ballclub.

Bo was a scene-stealer long before this, of course. You know the deal. He was the Heisman Trophy outfielder. The home run halfback. A two-sport super nova turned cross-training pop hero. Maybe it's true he should have picked one sport, but he was never anything less than a threat in both. A 450-foot homer

Moore achieves through 'sheer effort'

All-time women's track points leader 'a real workhorse'

By Jeff McIntire
Sports Writer

Saluki sprinter, long jumper, triple jumper, and all-around athlete Nacolia Moore broke the all-time scoring record in women's track at SIUC, adding an exclamation point to three straight years as the team's MVP.

Moore, a senior in administration of justice from Georgetown, broke Denise Blackman's (1982-85) record of 720 points, scoring a total of 742.75 points to date.

"That was a big goal for me, because there's a lot of great people at the top of that list," Moore said.

SIUC women's track and field coach coach Don DeNoon said it is sheer effort that allowed Moore to achieve the milestone.

"She's been a real workhorse. She gets bored when she sits still at track meets," DeNoon said.

"She's been a multiple event athlete who has also been very good at what she does. She might have been the all-time top scorer in MVC history, if there had been another year of it."

The Missouri Valley Conference is in its first year of featuring women's track competition.

Moore's workout consists of eight hours a week of jumping on Mondays, Wednesdays, and Fridays, and sprinting on Tuesdays and Thursdays.

Moore said she gets a lot of support from her teammates in the sprinting corps, including her best friend and fellow sprinter Crystalla Constantinou.

"We're a very close-knit team,"

Moore said.

"I'm really proud of her. She's very intelligent, hard-working, and dedicated, and it's a combination of these that allows her to compete in five events and win them," Constantinou said.

Hurdler Julie Tottleben said that Moore's accomplishments have really impressed her.

"It says something to be able to do all those events and not only do them, but excel in them," Tottleben said.

Tottleben also agreed that the sprinters have been very supportive of each other.

"The sprint group has been very supportive of each other, especially this year."

Moore is minoring in coaching, and hopes to coach after graduation.

"Hopefully, I will be coaching. I would still keep my competitive way and transfer it to my athletes," she said.

Moore said she hopes to work on the police force during the day and coach elementary school track in the late afternoons.

"I'd like to work with smaller children so I can set them in their ways. I'd like to teach them the right way from the start," she said.

Moore and the rest of her Saluki teammates will travel to Murray, Ky., Saturday to compete in the Murray Twilight Invitational.

SIUC is gearing up for a run at the MVC outdoor championship May 13-16 in Terre Haute, Ind.

Pair of quarterbacks head NFL draft outlook

The Sporting News

By now, NFL teams have their draft boards in order. They know pretty much the players they want as the first round unfolds.

There will be some surprises—we even surprised ourselves several times—in our first round, and we even orchestrate a trade between Philadelphia and Cincinnati.

By the way, the advice comes at a discount. It may be unwanted, but it's also cheap. Here's how our first round unfolds:

1. New England Patriots: **Rick Mirer, QB, Notre Dame.** Maybe Drew Bledsoe has an edge in overall physical ability, but Mirer's postseason work has showed he may adapt to the pro game quickly.

2. Seattle Seahawks: **Drew Bledsoe, QB, Washington State.** A great regional match. Bledsoe

would give the Seahawks hope at a position that has featured two first-round flops—Kelly Stouffer and Dan McGwire.

3. New York Jets: **Garrison Hearst, RB, Georgia.** After misfiring with Blair Thomas with the second overall pick in '90, can the Jets take a chance on another running back? Well, would you pass on Emmitt Smith and Thurman Thomas, the backs Hearst is compared with?

4. Phoenix Cardinals: **Willie Roaf, OT, Louisiana Tech.** Chances are they'll land Hearst. But if he is gone, the Cardinals need to upgrade the offensive line, because attempts to sign free-agent Harry Swayne failed. Roaf is a great, safe sack with the ability to play left or right tackle. Next time Phoenix needs to score at the goal line, this guy will help them get in.

5. Philadelphia Eagles (trade with Cincinnati Bengals): **Dan**

Williams, DE, Toledo. The Eagles should leap to select a big-time need player by trading one of their No. 1 picks and a second-round pick to Cincinnati. The losses of Reggie White and Jerome Brown need to be addressed.

6. Tampa Bay Buccaneers: **Marvin Jones, ILB, Florida State.** It might be a shock if Jones lasts this long because the Jets probably will take him at No. 3. Jones is an impact player who would fit beautifully in defensive coordinator Floyd Peters' 4-3 scheme, even though the Bucs already have signed Hardy Nickerson.

7. Chicago Bears: **John Copeland, DL, Alabama.** There is the temptation to go with Southern California WR-KR Curtis Conway, but if da Bears are going to play like da Bears, they need to restock the front four. Remember, new Coach Dave Wannstedt likes

versatility along the defensive front.

8. Detroit Lions: **Lincoln Kennedy, OT, Washington.** They've added three blockers through free agency (Bill Fralic, David Richards, David Lutz), but they're all guards. The Lions' entire game should be Barry Sanders, so the addition of a big-time tackle such as Kennedy is a must.

9. Atlanta Falcons: **Eric Curry, DE, Alabama.** Tough choice. But even with the addition of Pierce Holt and Jumpy Geathers, a potential pass rusher such as Curry is difficult to pass up. The problem is that Curry doesn't necessarily fit Jerry Glanville's defensive scheme, which calls for ends to play inside the offensive tackles.

10. Los Angeles Rams: **Jerome Bettis, RB, Notre Dame.** The

U.S., EUROPE ATTEMPT TRADE NEGOTIATIONS

The United States and the European Community Wednesday were said to have reached partial accord in their efforts to avert a trans-Atlantic trade war. But Washington is still planning to go ahead with sanctions over what it considers unfair practices. Announcement of the partial progress was made by Trade Representative Michael Kantor following phone negotiations with E.C. Deputy Commissioner Leon Brittan.

BENETTON SHOPS OPENING IN NORTH KOREA

North Koreans, citizens of one of the last hard-line communist countries, may find themselves all dressed up with nowhere to go if the Italian clothing manufacturer Benetton succeeds in opening shops there. The company, which persuaded President Fidel Castro to attend the opening of a shop in Cuba last month, is studying a joint venture with a pro-Pyongyang group of Koreans in Japan.

ITALIAN PRIME MINISTER CALLING IT QUITS

Italian Prime Minister Giuliano Amato announced Wednesday that he would step down in the near future, following this week's vote in favor of political change. Amato told parliament that his government could no longer continue in office because the outcome of Monday's referendum would change the country's present system. He scheduled a meeting with President Oscar Luigi Scalfaro to discuss his future.

nation

PRISON REBELLION ENDS PEACEFULLY

An 11-day rebellion at a maximum security prison in Lucasville, Ohio, ended peacefully Wednesday when prison authorities agreed to 21 demands set by prisoners. Seven inmates and one guard died during the siege, which began with a prison riot April 11. About 700 Ohio National Guard troops ringed the prison while a criminal rights lawyer negotiated the settlement. The prisoners' complaints centered around the prison's overcrowding.

MURDERER OF THREE EXECUTED IN FLORIDA

Convicted murderer Robert Dale Henderson was executed Wednesday on the electric chair in the state prison in Starke, Fla., officials said. Henderson, 48, was the 30th person to be executed in Florida since the re-introduction of the death penalty in 1976. The Supreme Court in Washington rejected a last minute stay of execution late Tuesday. Henderson was sentenced to death for killing three hitchhikers.

CLINTON PICKS NAVY SECRETARY NOMINEE

President Bill Clinton nominated businessman John Dalton to the post Navy secretary Wednesday. Dalton, a graduate of the Naval Academy in Annapolis, Md., was managing a company in Little Rock, Ark., where Clinton served as governor. The new secretary would have to deal with the so-called Tailhook affair in which Navy men were accused of sexually molesting female colleagues during a convention.

FBI INVESTIGATING INTRA-CULT KILLINGS

Speculation mounted Wednesday that some members of the Branch Davidian cult in Waco, Texas may have been shot by other followers to keep them from escaping the inferno that razed the group's headquarters. The Federal Bureau of Investigation (FBI) said one body had been found amid the debris with a bullet wound to the head. Federal agents also reported hearing gunshots coming from the buildings during the fire.

Corrections/Clarifications

Andrew Filicichia is studying for a master's degree in public administration with an emphasis on aviation administration. He was replacing forms: April 14, not selecting tax forms, he had obtained at an earlier date from the Federal Building. This was incorrectly stated in the April 15 Daily Egyptian.

SIUC women of distinction honored for achievements

By Karen Ham
Special Assignment Writer

Women constantly are making their mark on the University and community, helping to improve the status of women everywhere, a women's advancement official said.

Janice Schoen Henry, coordinator of University Women's Professional Advancement, said the women who make progress possible should be rewarded for their efforts.

"Many of these women serve as role models," Henry said. "We want to commend these women for their work."

Out of a pool of 74 nominees, 10 women were chosen from the SIUC community as 1993 University Women of Distinction.

The women were chosen on the basis of contributions made to the University and community and contributions made to the advancement of other women through

achievements in their own education, research, service and committee activities.

The award also was broken into six categories: faculty, civil service, administrative/professional, undergraduate, master's student and doctoral student.

"These women are outstanding in their field and have contributed on campus and throughout the community," Henry said.

The award was started in 1989 by President John C. Guyon in an effort to recognize the contributions made by University women, Henry said.

She said this year's pool of nominees was impressive.

"We had a very healthy pool of nominees in every category to choose from," Henry said. "It was very encouraging to see so many."

Henry also said she has seen an increase in

Student-oriented SIUC professor named best technical teacher of '92

By Erick J.B. Enriquez
General Assignment Writer

A poster outside the office of an SIUC professor reads: "The student is the most important person here: The student is why we are here; The student is why we exist here."

Because of her dedication to this creed, Eileen Troutt-Ervin, associate professor in advanced technical studies, was awarded "Outstanding Technical Teacher of the Year" at the 30th National Conference on Technical Education for the American Technical Education Association in San Diego.

Troutt-Ervin always has been dedicated to the idea that the student is the sole reason that the school is here.

"I think we need not lose sight of that," Troutt-Ervin said. "We should serve the student very well, not only in teaching and

advising, but try to make their experience at SIU a good experience; a challenging experience."

The award recognizes Troutt-Ervin's accomplishments as a full-time instructor whose performance as a technical teacher especially is outstanding and whose contribution to technical education has been significant.

Raymond Kahler, acting director of the division of advanced technical studies, said that she is not just a 40-hour person.

"Even during vacation times I will catch her in the office," Kahler said. "She is a truly dedicated person who doesn't quit when the clock says 4 p.m. She does this for the benefit of the student. Everyone should have her work ethics."

Troutt-Ervin said her work ethics were one

Service week offers reminder to students

ABOUT 30 COLLEGE STUDENTS IN ATLANTA started a program five years ago to help give African-American youths a little guidance.

The students, who attend the historically black Morehouse College, began the program to teach at-risk children in grades three through six that one can achieve goals within the law and that going to college and getting a career are better options than depending on welfare and drugs.

The program has grown 10-fold since its beginning: During the past year about 300 students spent more than 8,000 hours visiting boys in the classrooms of Atlanta schools. Mentors and children meet at least once a week for help with schoolwork and for academic motivation.

Today, in the midst of National Youth Service Week, President Bill Clinton will present the Morehouse Mentoring Program and 19 other individuals and organizations with President's Volunteer Action Awards.

NATIONAL YOUTH SERVICE WEEK should not pass without SIUC students examining themselves to see if they have what it takes to volunteer a little time for a worthy cause in the community.

College students are a segment of the population more likely to have the time and energy to volunteer, and it is not difficult to find work that needs to be done on the SIUC campus and in the Carbondale community.

Some students already have made a commitment to volunteer work. Fraternity and sorority members have volunteered at programs with local nursing homes, youth centers and day care centers, as have other student organizations and honor societies on campus.

Still other students work together as health advocates for the Wellness Center, trying to help fellow students through stressful times and trying to educate them about substance abuse and sexual choices.

BUT MANY STUDENTS do not feel they have the time or the power to help other members of society. That is rarely true.

People who want to do something generally make the time to do it. And people who volunteer usually are able to set their own pace.

All kinds of individuals have somehow taken time out of classwork and other work to give a bit back to the community. Three such students will be honored Monday with the General Motors Volunteer Spirit Award.

Volunteer work is not about praise or awards, and as First Lady Hillary Clinton said, "Service is not a one-way street."

"Service is not about doing something for somebody else and that's the end," she said in a speech Tuesday, which was proclaimed National Youth Service Day. "Service is about being committed and being a part of the community in which you live, and it means that you get as well as you give."

In addition to the benefits that are to be derived from the community, what volunteers get is an even better paycheck — the wonderful and irreplaceable feeling that comes from within.

Hundreds, responding to the Rodney King verdict, broke into stores, returning TV sets and numerous appliances.

Note from the Editor

Letters on homosexuality discontinued

The topics of homosexuality and minority status and homosexuality and mentality have been exhausted for the semester. The Daily Egyptian will not be publishing any more letters on those topics this semester.

It is the Daily Egyptian's policy to allow people a free forum to express views on a wide range of topics, and the continuing barrage

of letters about gays is hampering the right for people to make a timely comment on other important topics.

In addition, the DE reserves the right to run a representative sample of letters on any topic.

Certainly this semester a more than representative sample of letters on those particular topics associated with homosexuality

has run.

Nothing new has been stated in most of the letters in quite a while.

And the most telling reason the editors have decided to discontinue letters on the topic is that we are beginning to receive more letters by readers saying they are sick of the topics than we are receiving on the topics themselves.

It is time to move on.

Letters to the Editor

No Snickers signals real problem

I understand that the readers of the DE have several concerns that may be of more importance than my problem (i.e., condemning each other to hell, or writing weird letters referring to themselves as mythical Greek Gods). But I feel a great need to tell my story.

A few weeks ago I was sitting in class in the Communications Building when suddenly I was gripped with hunger pains. The solution: a Snickers bar. I left class and walked down the hallway to the vending machine. To my horror, I discovered there were no Snickers bars in the machine.

I felt a wave of panic overtake my mind. I raced to the other wing of the building — perhaps I would find America's snack time treat in another machine — but that machine too was void of the original Snickers brand candy bar. The slot that had once cradled gently the candy America craves now held Peanut Butter Snickers. Peanut Butter Snickers!

A cruel taunt to say the least. I tried to calm myself down. I limped weakly around the corner, having decided to settle for a 7 Up instead.

I rounded the corner. There it was, larger than life — the 7up soda machine. The words "7 Up The Uncola" were emblazoned on the front of the machine as if to say "come this way and enjoy a clean caffeine free beverage to quench your thirst."

I approached the machine slowly, paying it the respect it deserved. I dropped in 55 cents and went to press the selection button so that I could enjoy a cool refreshing 7Up. I became overwhelmed with shock and fell to the ground when I realized that there was no 7Up in the machine, there was not even a selection on the 7Up machine offering 7Up. I walked back to class feeling as if I had survived a gauntlet.

Perhaps this a question to be pondered: How can we solve the problems of our country when we can't even keep our vending machines stocked with Snickers bars and 7Up? Please continue condemning each other to hell and butting into private sexual habits of others. But as for me — I want America's snack time treat. — Amy Brown, senior, theatre

Funds for transit burden to SIUC

Dear Mr. Madlener:

This is an opposing view to your request for responses to the mass transit issue (April 16, 1993). The bus system will be good for most students; however, there are a few reasons why I will be voting against the system:

- It may be a \$20 fee now but don't try to fool anyone. It will continually rise for various reasons, expansion, maintenance, etc.

- It may be unlimited free use for students now, but again, for how long? Two years? Five years?

- Lastly, this is another fee that would be forced on commuters even though they will not use the system.

Why doesn't Carbondale fund the project and quit mooching off students? — Teresa Boulds, graduate student, vocational education studies

Editorial Policies

Signed articles, including letters, viewpoints and other commentaries, reflect the opinions of their authors only. Unsigned editorials represent a consensus of the Daily Egyptian Board.

Letters to the editor must be submitted in person to the editorial page editor, Room 1247, Communications Building. Letters should be typewritten and double spaced. All letters are subject to editing and will be limited to 300 words. Letters fewer than 250 words will be given preference for publication. Students must identify themselves by class and major, faculty members by rank and department, non-academic staff by position and department.

Letters for which verification of authorship cannot be made will not be published.

How to submit a letter to the editor:

A: You
B: Letter
C: Editor

Calendar

Community

APOLOGIA SOCIETY-SIUC/RSO will show the video "The Incredible Discovery of Noah's Ark" at 7 tonight in the Troy Room of the Student Center. For more information call Craig at 457-6203.

FEDERALISTS SOCIETY will hold a debate on federal drug sentencing laws at 7:30 tonight in the Law School, Room 108. For more information call Scott at 687-2286.

ILLINOIS DEPARTMENT OF Employment Security will provide job service information and registration to veterans from 1 p.m. to 4:30 p.m. today in the Student Development Annex, Building T-40.

INTERNATIONAL PROGRAMS AND Services will offer a workshop entitled "Employment Opportunities and Practical Training" at 3 p.m. today in the Saline Room of the Student Center. For more information call Mythili at 1FS.

INTERVARSITY CHRISTIAN Fellowship will be showing a video entitled "The Quantum Connection: Is There a Link Between New Physics and Christianity?" at 7:30 tonight.

SIUC NORML will meet at 7 tonight in the Hall of Fame Room of the Student Center. For more information call Drew at 529-4821.

SOCIETY OF SIGMA XI will present a lecture entitled "Modern Anesthesiology: the Interplay of Chemistry, Pharmacology, and Physiology" by Terri G. Monk, M.D. at 7 tonight in Neckers Building Auditorium, Room 240.

SIU SCHOOL OF ART AND DESIGN will present a slide lecture conducted by Jed Jackson entitled "War on Art: Censorship in American Government and Culture" at 7:30 tonight in Lear Law School, Room 102. For more information call 457-5163 or 549-2947.

CALNDAR POLICY -- The deadline for Calendar items is noon two days before publication. The item should be typewritten and must include time, date, place and sponsor of the event and the name of the person submitting the item. Items should be delivered or mailed to the Daily Egyptian Newsroom, Communications Building, Room 1247. An item will be published once.

CLINTON, from page 1

the GOP filibuster.

Even so, the White House refused to acknowledge defeat. Instead, the administration tried to get Republican backing for an eleven-hour proposal that offered to pay for most of the emergency spending by making offsetting cuts in other programs, as Republican opponents have demanded.

But Senate Minority Leader Bob Dole, R-Kan., who prevailed in the test of wills with the new president, rejected the last-minute White House plan and Democrats spurned a GOP counter-offer to provide slightly more money than under a previous Republican proposal.

The Senate ultimately jettisoned more than \$11 billion worth of programs, including \$1 billion for a summer jobs program, \$5 billion for highways and public works, \$300 million for immunization of children and \$141 million for small business loans.

The measure now goes back to the House, which approved the president's original \$16.3 billion stimulus package last month. The House was expected to approve the Senate bill, which would keep extra jobless benefits flowing to an estimated 1.8 million Americans before existing funds run out sometime next week.

Speaker Thomas S. Foley said recently there would be dismay among House Democrats who voted for Clinton's entire program. But he acknowledged that it might be difficult to revive much of the emergency spending in view of the determined Senate Republicans.

Clinton's reaction was low-key. He told reporters he was "disappointed" but not "disheartened" and declared that the Republican tactics "did not make a lot of sense."

"This is a defeat — not for President Clinton — but for the American people and the American economy," said Senate Majority Leader George J. Mitchell, D-Maine.

WOMEN, from page 3

the number of nominees over the years and has every reason to believe next year's pool will be even bigger.

"There were definitely more this year and I expect it to grow," Henry said. "Every year we have a more qualified pool to choose from."

The winners include:

- Elaine M. Blinde, associate professor of physical education,
- Mary Wright, associate professor of mathematics,
- Nancy L. Quisenberry, associate dean of the College of Education and professor of curriculum and instruction,
- K.y. Brechtelsbauer, assistant professor of physical education and head softball coach,
- Beverly Walker, director of the overseas program representing administrative and professionals,
- Lisa Hitt head of media services in the Learning Resources Service,
- Pansy D. Jones, administrative

assistant for the dean in the College of Communications and Fine Arts

- Tanuja Srivastava, doctoral student in business administration,
- Bethany Wiltshire, master's student in plant biology and
- Margaret O'Boyle, a junior in civil engineering representing undergraduate students.

O'Boyle said she was surprised she was chosen.

"I was surprised that I got it," O'Boyle said. "It's an honor to be picked out of all of the undergraduates nominated."

Wright said she was also honored by the award.

"I am very honored and pleasantly surprised," Wright said.

"Everything that awards people, both men and women, is good. This award also helps to correct the balance (between men and women) and anything that draws attention to that is good."

PROFESSOR, from page 3

contributing factor to the award.

"I think I could definitely describe me as a workaholic," Trout-Ervin said. "What led to the award is commitment to teaching my own students at my own institutions but also being involved at a regional and a national level in technical education."

Fred Isburner, associate dean of the College of Technical Careers, said Trout-Ervin's performance in class evaluations played a significant role in her receiving the award.

"She certainly deserves the award for the time, energy and commitment she extends to her students," Isburner said.

As a professor, Trout-Ervin admits that her courses were difficult, but she did try to cover things in relevant manner.

"You wouldn't find very many students that say I was an easy teacher," Trout-Ervin said. "Whenever students have taken a course with me I've tried very hard

to cover the material well and keep up on current issues that affect that particular course material."

Recently, Trout-Ervin was appointed chairwoman of a newly-formed department, Technical and Resource Management.

As chairperson, she said that changes will be made in

"I'll have to make some changes," Trout-Ervin said. "Instead of my major emphasis being teaching and advising, I'll be placing more emphasis on administration."

She said she hopes to be supportive of her faculty. One goal for the future is to have a high quality program and to serve the students well.

"I'm very conscientious that the students get their money's worth," Trout-Ervin said.

"As chair of this department, I would like to see that student's get their money's worth on any course that they take and that it's a good experience for them."

CITY, from page 1

had come into the council in the Year of the Woman.

"I'd like to talk to Helen, look her up and see how she dealt with being on the council," Flanagan said. "I've been flabbergasted today—by the reality of it all. With the broad support that I have, I'm sure I will be able to handle everything I'm faced with."

"She ran an organized campaign and had a lot of support as seen in the votes ... I'm sure she will be able to represent these people and the rest of the community as well."

—Mayor Neil Dillard

Flanagan said she was very excited and thanked the people who worked with her throughout the whole process.

"I wasn't to get to work right away, I want to learn and give the council my input as well," Flanagan said. "I also think the council will have to start looking more at the common good and not just special interest groups."

Dillard said Flanagan has been an important member of the community for many years in her volunteer work for the city and her

work on various committees.

"She ran an organized campaign and had a lot of support as seen in the votes," Dillard said. "I'm sure she will be able to represent these people and the rest of the community quite well."

Yow said he was pleased with the results and was confident to have placed either first or second in the elections.

"I was a little disappointed in the voter turnout, it could have been a lot higher," Yow said. "Each candidate could have had 200 to 300 more votes if the turnout was higher, and that could have changed the outcome of the elections."

Yow said he was a little surprised that Flanagan came out on top, but he had no problems with that because he is willing to work with anyone.

"She obviously conducted a good campaign and worked hard to obtain these results," Yow said. "I don't think I would have won if I didn't talk to the hundreds of people I did. I'm sure Maggie did the same."

Dillard said Yow has been an outstanding council member who has worked hard in his last eight years on the council.

"Mr. Yow's work has been positive for the City of Carbondale," Dillard said. "He has been willing and able to work on the council, representing the views of the community of Carbondale."

Dillard said the new council will continue to move forward and be the council the city of Carbondale is deserving of.

The new council will have its first meeting May 4.

Barry will talk about your favorite Brady episodes and tell what really happened behind the scenes.

Deadline for study abroad approaches

By Candace Samolinski
International Writer

Time is running out for students to sign up for the various study abroad programs offered by SIUC, said the program coordinator for International Programs and Services.

"Many of the programs do have some space left but students need to get their applications in now," Thomas Saville said. "We need adequate time to arrange things like housing and transportation."

Saville said the programs in areas such as Nakajo, Japan and Bregenz, Austria are filling up fast. There are about 15 to 20 people signed up for each program as of this date.

"If a student is interested in applying for the fall or summer they should act now," he said. "Especially if they want to be included in the Nakajo program."

The availability of space for the interdisciplinary seminars in Egypt and Greece is limited.

About 46 people are signed up at

this time and a waiting list for others who are interested in being maintained.

Students wanting more information about exchanges through the International Student Exchange Program should also inquire immediately to get the appropriate paperwork.

"There are openings to study in countries such as Finland, Korea, Argentina and Hungary," Saville said.

"These programs operate on a one for one basis so students

should act now," he added.

The semester in the Baltics program at the University of Tartu, Estonia has a deadline of May 31.

"Although the program has this deadline we encourage participants to get their applications in at the earliest possible date," Saville said.

Anyone interested in study abroad programs should contact Thomas Saville at 453-7670. International Programs and Services had information on additional countries not mentioned here.

Confrontation results in 2 arrests

By Joe Littrell
Police Writer

Two men were arrested Tuesday night after two SIUC students reported an assault at a local business, hospitalizing one overnight.

Craig Scott Thomas, 21, and Robert Musser, 23, both of Carbondale, were arrested at 8:45 p.m. Tuesday after a confrontation which began inside Sound Core Studios, 122 S. Illinois Ave.

According to Carbondale police, Thomas and Musser first encountered the victims, Scott Furtwengler, 28, and Scott Munson, 27, earlier in the evening when the two went to the apartment above Sound Core, which Thomas apparently had used as a residence in the past.

Thomas and Musser allegedly

entered the apartment, saying they were looking for mail which might have come for Thomas since he had left the residence. According to police, the men argued and Thomas and Munson left the residence.

Thomas later returned with three males and confronted Furtwengler and Munson in the business itself, police said.

Furtwengler allegedly was struck several times in the head.

Munson fell or was pushed to the ground and was kicked in the face and shoulders several times.

Furtwengler and Munson were taken to the Memorial Hospital of Carbondale, where Munson was treated and released and Furtwengler was held overnight for observation.

Munson was charged with criminal trespass to property,

posted \$100 and was released.

Thomas was held at the Jackson County Jail and charged with aggravated battery and criminal trespass to property.

Police had no estimate of damage to property at Sound Core, and store management was not available for comment.

DE will offer summer camp for 25 high school students

By Tina Davis
General Assignment Writer

For the first time, the Daily Egyptian is offering a day camp this summer for high school students to give them experience, teach them ideas they can pass on to their schools and get them familiar with SIUC.

From June 28 to July 2, a maximum of 25 high school students from a 50 mile radius will be developing their ideas for a news letter produced by the students and printed on the DE laser machines.

"For one, it will be an excellent opportunity for high school students to get hands-on experience in journalism," Wanda Brandon, managing editor of the DE said.

Through workshops and assisting a Daily Egyptian staffer, students will learn about writing, photography, editing, designing and sales.

These skills will then be put to practice in order to produce a professional quality newsletter. Camp members will write and edit stories, copy and size photographs, sell advertising and design and correct pages.

"The camp will also allow students to become familiar with the campus and the journalism program at SIUC," Brandon said.

On the first Monday of the camp, the students will get a tour of the

facilities and meet the staff.

After learning about all of the jobs available on the newspaper, the students will choose the area they would like to work in.

Finally, Catherine Hagler, business manager of the DE said the camp gives the opportunity to make new friends and gain experience to take back to their high schools and use on their newspapers and yearbooks.

"We also hope our staff will serve as mentors for the students, so they can tell them what things are like from student to student," Hagler said.

"We're really excited about the camp and we hope the students use it as a learning experience to take back to their schools," Hagler said.

The students will put their talents to practice when they edit the articles for the newsletter, make corrections on ads and page design and assign headlines so the letter can be printed.

The finished product will be printed on the Daily Egyptian laser printers and be available for distribution at the picnic at Campus Lake where everyone will get a chance to say good-bye.

At the end of the camp, there will be a survey for the students in order to evaluate the camp and improve it as the years go by.

For more information about the camp call the Division of Continuing Education at 536-7751.

Police investigate burglary of stereo equipment at bar

Carbondale Police are investigating the early morning burglary of a local business.

Frankie's Bar, 204 West College, was burglarized between 1:15 and 8 a.m. April 6 by unknown persons who forced a door to gain entry to

the building. A Sony CD player and stereo, a Kenwood CD player, TOA speakers and other miscellaneous items valued at more than \$5,000 were taken in the robbery.

Anyone with information on the robbery can call Carbondale Crime Stoppers at 549-2677.

Clean Air amendments threaten Illinois coal

By Erick J.B. Enriquez
Special Assignment Writer

Keeping the air clean by the standards of the Clean Air Act amendments of 1990 is a serious issue in the Southern Illinois area, and with the enforcement of these amendments, change in this area is inevitable.

Taylor Pensoneau, vice-president of public relations for the Illinois Coal Association in Springfield, said that the need to clean the air of the sulfur dioxide that harms it will create a loss of jobs in a once dependent marketplace.

"Overall, the implementation of the Clean Air Act posed very ominous clouds for the job community in Southern Illinois, as well as other places," he said. "We're not only seeing mines close down, but also the jobs of other individuals who depend on those mines."

Miners in the town of Sparta were spared the possible loss of their jobs, when Illinois Power Baldwin Station announced that they would continue to use the high-sulfur Illinois coal that they supply.

On March 15, 1993, Illinois Power, Peabody Coal Company and Arch Coal Sales Company reached an agreement in principle that provided for the continued use of their coal at the Illinois Power Baldwin Station in Randolph County.

Prior to the agreement, Illinois Power Baldwin Station was considering purchasing cheaper coal from western states to meet requirements for the Clean Air Act.

"The continued use of Illinois Coal at Baldwin is going to help the business and job picture," Pensoneau said. "The loss would have been devastating."

According to the Clean Air Act, facilities such as the Illinois Power Baldwin Station must meet standards of 2.5 pounds of sulfur dioxide every one million British thermal units by Jan. 1, 1995.

Yet, with the recent sale of emission allowances to Baldwin Station, more sulfur dioxide will be released into the atmosphere past the 1995 deadline.

The emission allowances are time credits from other utility companies that met Clean Air Act requirements before the 1995 deadline. This surplus time can be sold to other utility companies to use so that they can continue to emit sulfur dioxide into the atmosphere past the deadline.

Ron Greenfield, a public relations officer

SIUC physical plant finding it hard to reduce emissions to zero

By Tracy Moss
Special Assignment Writer

The SIUC officials have taken steps to reduce pollution at the coal-fired steam plant, but if the plant is to continue burning Illinois coal, the plant will continue to pollute the air.

James Tyrrell, director of the environmental health and safety department, said the physical plant, which heats and cools most of SIUC's campus buildings, burns high sulfur dioxide Illinois coal that emits sulfur pollutants.

"The plant is not able to reduce emissions to zero unless you get completely away from coal," Tyrrell said.

He said the Environmental Protection Agency has mandated the plant to reduce its emissions to zero, but there is no known system that would enable the plant to continue using Illinois coal and completely eliminate emissions.

"Politically, it is not possible for us to use anything else besides coal," Tyrrell said. "The University will probably have to deal with this problem sometime."

He said officials have already replaced one coal-fired boiler in the plant with a gas-fired boiler that will cut down on emissions. Another coal-fired boiler will be replaced sometime in the future by a gas-

fired boiler that can also burn coal.

James Tweedy, vice president of administration, said after the second gas-fired boiler is in place, the three coal-fired boilers will be completely rebuilt, and the gas-fired boilers will be for emergency use only due to the expense of operation.

On Oct. 30, Gov. Jim Edgar released \$25.2 million in funds for a 14,000-square-foot addition to the plant that will double its steam-generating ability and provide for future capacity expansion.

Tweedy said the fluid bed will create approximately 120 to 150 thousand pounds of steam an hour.

The expansion will include a fluid-bed combustor that will remove sulfur from the coal. A new smokestack for the combustor will rise 75 feet above the existing one. The smokestack must be a certain height above the buildings so the fumes and materials from the stack will be deposited correctly by the winds, Tyrrell said.

Tweedy said the University will not know how much pollution the EPA will allow them to emit until the agency approves the construction permit.

He said if the design for the steam plant will emit a level of pollutants unacceptable by the EPA, the plant must be redesigned or pollution units must be purchased.

The EPA determines in units the level of

pollution a building will be allowed to emit. If the steam plant design will emit more pollution than the level mandated by the EPA, then the University can purchase units from other companies that are not using all of their allowed units.

Although officials do not know exactly how much the system will pollute the environment, there will be a reduction.

"The system will make a substantial decrease in emissions," he said.

He said the system is almost experimental, and the design work is still in progress, so construction of it probably will not begin for another two years.

Tweedy said the architectural engineers will start right away on the design for the addition, and their goal is to have the steam plant on-line in late 1995.

The health and safety department is in the process of making changes on campus to meet other EPA guidelines.

Tyrrell said the EPA mandated new regulations for underground storage tanks, and the University will have to replace such tanks.

He said the first tanks to be replaced were those at travel service containing gasoline, he said.

"The tanks now have new monitoring devices to prevent and detect leaks," he said.

for Peabody Coal Company, said the sale of the emission allowance is a way to create value for sulfur dioxide reduction.

"This is an attempt to use market mechanisms to establish a value for the reduction of sulfur dioxide emissions," Greenfield said.

John Mead, director of the Coal Research Center at SIUC, said the allowance program was created by the past Bush administration as a means for the end of maximizing the freedom to make business decisions.

"The result is that companies may be able to delay decisions to build scrubbers or switch to other fuels," Mead said. "But its long-term effect on our market is unknown."

Other businesses in Southern Illinois were not as lucky as the mines in Sparta.

Greenfield said that Epson in Albers was unable to match the market price set for coal, which caused them to lose the contract to supply coal to an Indiana power plant. Peabody mine number 10 will be closing in 1994 for the same reasons.

"We're starting to see the impact (of the Clean Air Act)," Greenfield said. "We're also beginning to see some impact on jobs, and it's only going to get worse."

Utility companies will begin to seek alternatives to the high sulfur coal that Illinois mines provide. Instead of using coal from western states, Greenfield said that utility companies could use new technology.

"There are opportunities to achieve clean air without suffering these job losses," Greenfield said. "If time permitted, we could

use some new and cheaper technology."

Mead said that when utility companies turn to that new technology, it will initiate the creation of new markets.

"The day that utility companies have to turn to new technology is the day that Illinois coal will achieve significant new markets," Mead said. "Mines of the future will be more automated, and there will be fewer workers per ton of coal. This is a trend that will inevitably occur. New expanded markets will hopefully more than off-set the reduced hours per ton of coal."

As far as the environment is concerned, Mead said that the reduction of sulfur dioxide will not have a dramatic effect on the Southern Illinois area because the levels of emission in the area have always been low.

CRAB, from page 1

connected to the complex process of identifying responsible parties, negotiating consent agreements, allowing for public comment and conducting on-site testing.

Leanne Moore, Superfund project manager for the U.S. Fish and Wildlife Service, said because of the variety of hazardous waste problems, the cleanup effort has been divided into five operable units — munitions, metals, PCBs, miscellaneous and water towers.

The first four units were formed to take care of past industrial waste problems, Moore said. The metals unit is closest to removal, she said.

The metals unit includes a plating pond (contaminated with chromium), the fire station landfill (lead) and the old refuge shop (lead, cyanide, and possibly chromium).

"At the metals unit we are actually ready to start remediation and go on site to excavate soils, treat soils and construct a site for disposal of the waste," Moore said. "Sometime during the summer, we should start on-site activities."

A St. Louis-based company was identified as the low-bidder for the cleanup April 15. Heritage Remediation/Engineering Inc. submitted a bid of \$1.787 million. It will be about one week before federal officials can verify if the company meets bonding and insurance requirements to handle the work.

The munitions unit covers the residues left when the producers

detonated and disposed of stockpiles of explosives and other materials after World War II. Moore said. Currently, testing is being done at these sites, called burning grounds, to determine if the residue poses a threat to human health and the environment.

Water, sediment and soil samples are being analyzed to see if there are unacceptably high levels of TNT and metals in the area, Gowda said.

No actual removal or neutralization of the PCB unit is planned until middle or late 1994. Moore said a consent agreement, which outlines the work needed to eliminate the PCB contamination, was signed between the EPA and a potentially responsible party, Schlumberger, Inc.

The consent decree has been in effect since August 1992, and Schlumberger is conducting sampling to determine the extent and degree of contamination. The removal process will include on-site incineration of contaminated materials and possibly a process which neutralizes the PCBs within the soil. The incinerator will be assembled on-site and be removed after the cleanup is complete, Gowda said.

The miscellaneous unit consists of sites not identified in initial investigations, Moore said. The sites must be tested to determine if monitoring or remediation is needed.

While the first four units address past disposal practices, the water tower unit was formed after workers at the refuge sanded lead-based

paint from water towers in Fall 1991 during routine maintenance.

Moore said the Illinois EPA and the U.S. EPA was notified about the problem in January or February of 1992. Some of the material was classified as hazardous waste and taken off site in October 1992. Some material still remains because wet weather conditions hindered the cleanup, Moore said.

"We hope to have the rest of the material removed by the end of the month," she said. "We are pleased we have been able to respond so quickly."

"The marvelous thing about the refuge is we have more than 43,000 acres, and these spots of contamination are within the closed restricted portion of the refuge," she said. "We still have a lot of acreage for people to enjoy."

Part of the Fish and Wildlife Service's responsibility is to ensure that wildlife and visitors to the Refuge are not adversely impacted by these problems, Moore said.

"We are concerned about the impact of these problems," she said. "We look for effects and potential impacts on wildlife to determine action."

Gowda said industries currently operating on the refuge are not responsible for the hazardous waste problem.

"There are some industries still in business, but their activities are regulated by the IEPA," he said. "The Superfund sites only address past activities."

Court seems to favor punishment for hate crimes

Los Angeles Times

WASHINGTON—The Supreme Court heard arguments Wednesday over the constitutionality of so-called hate crimes law—this term's most important free speech dispute—and appeared inclined to uphold laws that punish criminal acts inspired by racial or ethnic hatred.

At issue is the government's power to impose harsher penalties on criminals who target blacks, Jews, gays or other persons because of their race, religion or

gender. The case before the Supreme Court involved a Wisconsin law that permits juries to give longer prison terms to criminal who "intentionally select" their victims because of their race, gender or sexual preference.

At least 21 other states have similar laws, and Congress is considering a proposed federal law to raise the penalties for bias-motivated crimes.

Last year, the Supreme Court unanimously struck down a St. Paul, Minn., law against cross

burning because it violated the First Amendment's guarantee of free speech, and its broadly worded opinion cast doubt on all manner of laws that punish expressions of hatred.

But during Wednesday's arguments, the justices expressed skepticism about extending that principle to strike down measures that punish criminal conduct inspired by hatred.

By the end of the hour, even Justice Antonin Scalia, the author of last term's strict free-speech opinion, seemed ready to endorse a

hate law that punishes an existing crime, such as assault.

The Wisconsin case found its way to the Supreme Court after the state supreme court last summer struck down its hate-crimes law on grounds that it punishes "bigoted thoughts."

The issue arose when Todd Mitchell, a 19-year old black youth, allegedly urged several of his friends to "move on some white people." They subsequently beat up a 14-year-old white teen-ager on a street in Kenosha, Wis.

Mitchell was sentenced to two

years in prison for aggravated battery. Two more years were added to his sentence because the crime had been racially motivated.

However, the state supreme court deemed the extra punishment unconstitutional, contending it punished "a thought crime." Had Mitchell not uttered his comments about white people, he would not have had his prison term doubled.

If the Supreme Court were to adopt that view, a host of civil rights laws could be jeopardized, in addition to the many hate-crimes laws.

Environment scores with Clinton, Gore

By Jeremy Finley
Special Assignment Writer

A president with an environmentally-minded cabinet could mean a healthier planet for the future, if promises are not as empty as the ones of Washington's past administrations, environmental officials said.

Local environmentalists said they counted President Bill Clinton and Vice President Al Gore's election as a victory for the environmental cause. Most are pleased that the United States' highest stations are filled with those caring about the environment.

Clinton has promised that his administration will be a large step for environment progress, and Gore wrote a best-selling book

of his ideas and concerns about the planet's ecological future.

But Andrea Spader, coordinator of Carbondale Clean & Green, said campaign promises are not as important as end-of-term results.

"It is really too early to see any kind of change," she said. "But there is an attitudinal change, for people are now more environmentally conscious."

Laurel Toussaint, chairwoman of the Shawnee group of the Sierra Club, said she has high hopes for Clinton's administration, but understands that this is only the first year of the president's term.

"The situation is not perfect at all," she said. "But at least we're off in the

right direction."

Jackie Badger, member of the student environmental group The Greens, said, although Clinton's administrative appointments had a slow beginning, he is confident the current administration will be more successful than ones in the past.

"I am confident that Clinton will do a better job than Bush," he said. "Clinton's appointments will place more concern on environmental issues."

Clara McClure, member of the Sierra Club, said Gore is the key player in the environmental success for the next few years.

"It's very impressive how interested Gore is with the environment," she said. "Quayle did not seem to have any interest at all."

The Bush administration has often been criticized for putting business over environmental concerns. Toussaint said the only environmental policies of Bush's administration ended badly.

"A lot of (environmental) things got done, but they were all destructive, such as the giving away of public land, and no energy policy," he said. "The Reagan/Bush administration was the worst thing that ever happened."

Clinton and Gore had a forest summit on April 2 in Portland, Ore., to have a conference with timber manufacturers and environmental activists, who voiced

RECYCLING IN CARBONDALE

Recycling advocates differ on improvement opinion

By Candace Samolinski
Special Assignment Writer

Tomorrow's generation will pay for today's recycling mistakes, a Southern Recycling Center employee said.

"Recycling has really improved since 1991," Henry Ticer said. "I think people finally realize that if they cut down a tree that is 200 years old, they won't see another one like it. If they don't do something now, it will be their grandchildren that will pay for it."

Recycling businesses throughout Southern Illinois have become commonplace in the last few years. In the surrounding areas of Carbondale, Carterville, Marion and Murphysboro, there are 10 recycling centers. In addition, there are several recycling bins at surrounding Wal-Mart stores.

With this increase in the accessibility of recycling centers are people recycling more?

Ticer said yes. He said he has worked in the recycling business since 1991 and has noticed an increase in awareness and recycling habits in that short time.

"We recycle everything here, including batteries," Ticer said. "People are definitely becoming more aware of what is going on with the environment."

Tasis Karayiannis, one of the owners of Southern Recycling Center, said newspaper and magazine recycling has increased 10 to 15 percent. Gary Galbraith, owner of Gary's Metals in Carterville, also agreed with the idea that people are recycling more.

"We only recycle metals here, but I have noticed an increase in the amount we have been taking in," he said. "One reason I think this is happening is because the landfills have started limiting the amount and kind of materials they will accept."

Galbraith said the least recycled metal is steel. Many people do not realize they can recycle many of their old appliances as well as other types of metals including brass and copper, he said.

"A lot of the time people just try to push

off their old appliances on someone else," he said.

George Browning, public health environmentalist in the solid waste division of the Jackson County Health Department, disagreed. He said people are not recycling more.

"We have lost some available markets for recycling, especially for plastic," he said. "The price for aluminum has dropped, and I don't want to say price is a motivator, but it does count."

Browning said there are some people who recycle for financial reasons and others who do it for more personal reasons.

"We do have those people who continue to recycle year after year, and others who will not do it unless it is made fairly convenient for them," he said. "We have tried for several years to educate people, but it hasn't gone as well as I had hoped."

Both Ticer and Browning said they have encountered problems with people abusing recycling facilities. Ticer said the facility where he works no longer takes plastic because of a problem with garbage.

"It was getting to the point where people would leave garbage like chicken bones in plastic containers," Ticer said. "This type of thing can cause \$20,000 worth of damage to a machine and cause major problems."

Browning said a similar problem occurred with a recycling bin in front of Country Fair.

"We had people dumping household garbage in the recycling bin, and we were forced to move it from in front of Country Fair," he said. "This was unfortunate because we have had a lot of people call and ask about it. These were probably the people who recycle continuously."

Andrea Spader, coordinator for Carbondale Clean & Green, said the price of recycling plastic has decreased because the resin used to make plastic is cheap. The only areas in Southern Illinois that take plastic for recycling are the Herrin and Murphysboro Wal-Marts.

Commission must have initial plan to reach goal of 25 percent recycling by March 1995

By Candace Samolinski
Special Assignment Writer

The future of recycling in Carbondale and surrounding counties currently lies in the hands of the Greater Egypt Regional Planning and Development Commission, a member of the Jackson County Health Department, said.

"By March 1995 the commission must have an initial plan to promote recycling within Carbondale and the surrounding area to 25 percent," George

Browning, public health environmentalist, said. "Hopefully, they can accomplish this goal and even increase the percentage."

Larry Newton, solid waste planner for the commission, said he and his associates are currently gathering data in Jackson, Williamson, Franklin, Perry and Jefferson counties.

"The law which establishes what the plan should do is written as such: we should strive for a goal of recycling 25 percent of all recyclable wastes based on the viability of the recycling market,"

Newton said.

Newton said current statistics indicate Jackson county recycles 8 percent, Perry county has a rate of 9 percent and Williamson, Jefferson and Franklin counties recycle about 5 percent.

"We are trying to find out how many improvements will be needed to meet the requirements by the year 2000 in the areas of landfills and recycling facilities," Newton said.

He said more recycling centers

see COMMISSION, page 4A

Sierra Club members help area with environmental hope, action

By Shawna Donovan
Special Assignment Writer

The grassroots action of the Illinois Sierra Club has become a major player in keeping the state protected.

Through lobbying and action campaigns, the Sierra Club has been able to block developments at the Sugar Creek city lake project in Marion and help organize local forest campaigns.

Ed Cook, the local Sierra Club chapter forest service chairman and Makanda resident, said the environment has become a major issue in Illinois.

"We are trying to work with (Illinois) to help protect. It is a major issue," Cook said.

"The Sierra Club has a purpose to protect and preserve through any legal means," Cook continued.

The Southern Illinois group, called the Shawnee, became more active in 1986 when the National Forest Management Act came into effect, and there had to be a plan for all national forests.

State officials composed a plan which did not provide environmental protection. The Sierra Club stepped in and became the key player to appeal the plan.

Agreements were made with environmental groups and state officials by amending the plan.

The amendments, which still are being tied up in the courts because it is not good enough to stabilize the environment, have provided the Shawnee Forest with some

adequate protection.

"Our biggest accomplishment has to be the wilderness project," Laurel Toussaint, a executive board member from Carbondale, said.

The project saved 30,000 acres in 1990 that was added on to the Shawnee Forest.

There are seven areas to date with three more left to go that qualify, according to Toussaint.

"There are another 12,000 that qualify," she said.

The group is diversified with their membership.

Older to middle-aged citizens are actively involved.

Jim Balsitis, vice chairman and national outing coordinator from Carbondale, said he got involved because of the service outings.

"Our outings range from recreational to educational. They deal with some conservation issue," Balsitis said.

"I joined in 1988 because I had a friend in it. I am not political. I like being outdoors and doing service," Balsitis continued.

Balsitis, along with others, take outings all over the area and region.

"I have led service trips at the Shawnee, Lake Superior and in Arkansas," he said. "It is not strictly work but there are outings for relaxation."

The group occasionally meets to talk

Atrazine herbicide worries farmers in Southern Illinois

By Jeff McIntire
Special Assignment Writer

The concern for the environment extends to the use of potentially harmful pesticides used in crop fields. The controversy in Southern Illinois and all over the country has focused on the use of a herbicide called atrazine.

Atrazine, a herbicide used primarily in corn production, is a chemical deemed harmful to animals in the environment. A.G. Taylor, agricultural adviser to the Illinois Environmental Protection Agency, said the legal limit of atrazine concentration in water supplies is three parts a billion.

"Pesticides tend to be a problem when they end up in places where they were not intended to be, and we do have such problems that exist in Illinois," Taylor said.

Taylor said atrazine is a prevalent problem in Southern Illinois.

If all the chemicals applied to the crops were to remain in the cropland, then the environmental damage would be minimal, Taylor said.

They cause problems when they migrate off the field and into water supplies, he said.

The pesticides are carried away by the wind and runoff water and are also drained out of the field in tile systems. Tile systems are set in fields that are wet year round and consist of tiles placed under the fields to allow adequate drainage.

Les Morrow, a toxicologist, said atrazine has a fetotoxic effect at concentrations exceeding three parts a billion, resulting in low weights in newborn animals.

Warren Goetsch, chief of the Bureau of Environmental Programs at the Illinois Department of Agriculture, said atrazine is not harmful if used according to labeled directions.

Atrazine manufacturers volunteered to change labels to include specifications for setting distribution back from surface water supplies.

The guidelines were adopted by the U.S. EPA, Goetsch said.

"The label changes that have been made should have a positive effect on pesticide usage," he said.

Roger Meneses, a farmer from Anna, said that pesticides such as atrazine have helped in production of the crops.

"The use of chemicals has helped our soil, enabling us to prevent erosion and stop weeds," he said. "If we can't use them, production is a sure thing to drop."

George Kapusta, SIUC professor in plant and soil science, said atrazine, when used properly at labeled rates, is environmentally safe.

Atrazine usually is sprayed on the crops once a year, and the specifications that farmers follow consist of two pounds a acre, Kapusta said.

"Most farmers would not exceed the specifications because it's money out of their pockets," he said. "Any pesticide or pharmaceutical taken in extremely excessive dosages will have a toxic effect."

Kapusta said it takes concentrations much higher than the specifications to induce fetotoxicity.

Atrazine is used widely among farmers because it is very effective in controlling weeds, it is unharmed to crops and it is economical, he said.

Committee to search dumpsters, reduce waste at SIUC

By Angela Hyland
Special Assignment Writer

The SIUC Recycling Committee is preparing to send people to sort through 200 pounds of trash.

To fulfill requirements of the College Recycling Law, the committee must develop a comprehensive waste reduction plan by 1995.

By Jan 1, 2000, solid waste disposed in landfills must be reduced by 40 percent.

Before a plan can be developed to reduce waste, committee members must determine how much waste SIUC produces, said James Tyrrell, chairman of the waste characterization subcommittee.

This will be done by collecting trash from all over campus and sorting through it to determine what type of items are being thrown away, he said.

"It's not a very pleasant job, as you can imagine," Tyrrell said. "It's a pretty nasty job and there are potential hazards."

To avoid encountering blood pathogens or coming down with tetanus from a cut or scratch, workers will have to wear protective gear such as goggles and heavy gloves, he said.

"When you're working with waste, you don't know what's going to happen," Tyrrell said.

Grassroots efforts have helped to begin recycling process

By Katie Morrison
Special Assignment Writer

While SIUC does not have a formal recycling program in place, there has been some progress on campus.

"We have grassroot efforts in place," said Bill Capie, associate vice president for administration and chairman for the recycling committee.

Many campus locations have bins for aluminum can and paper recycling, said James Tyrrell from the Center for Environmental Safety.

"Individual offices on campus run their own efforts," Tyrrell

said. Public Act 86-1363 states that waste reduction plans must address certain topics.

- the amount of waste generated by volume
- the composition of the waste
- current efforts to recycle
- cost of waste collection and disposal
- future handling of waste
- proposals to reduce the amount of waste to be put in landfills.

When Jeanine Bulliner-Ross, campus food service recycling representative, started on a recycling program in Spring 1991, there were virtually no

efforts to recycle.

"We worked on getting containers in the buildings for aluminum cans," Bulliner-Ross said. "On the agenda for next year is bins for newspapers."

Other campus recycling improvements are the use of napkins that are not chlorine bleached and plans for cardboard recycling in the next two years. Recycling cardboard could make great improvements, Bulliner-Ross said.

"That would eliminate tons of garbage," she said. SIUC has had some success

see UNIVERSITY, page 4A

mitted to the economic and practical side of the recycling effort. It really makes for an interesting mix."

Since taking the position, Capie said he has realized the importance of people getting involved.

"In order for this to be effective, we're going to need to effect a lifestyle change," he said. "This generation has been raised to be a disposable culture. Right now, we dispose of virtually everything."

Capie said he has since realized individuals have a moral responsibility to recycle. Actions have a significant influence on the environment, and people need to be made more aware of this, he said.

"Our landfills are filling up. Our natural resources are drying up," he said. "We need to slow the filling of the landfills and save the natural resources — but these are long term objectives."

In order for these things to change, Capie said students need to be sensitized to the environment.

"We'll never succeed without student support," he said. "A recycling effort would be a dreadful failure without that support."

Capie said change won't take place over night, but it can happen.

"It's a process," he said. "Just as people got used to throwing things away, they'll have to get used to recycling."

New water plant in Carbondale's future

By Sanjay Seth
Special Assignment Writer

Carbondale city manager Jeff Doherty said the decision to start building the new water treatment plant was made about two and a half years ago.

The city was faced with meeting new more stringent requirements under new Environmental Protection Agency's standards on surface water treatment regulations.

The original plant, which was built in 1926, could not meet the new regulations with the present facilities it had. James Swayze, manager of water operations, said the two most important problems were turbidity or the amount of suspended solids in water, and contact time, the amount of time water is in contact with chlorine.

In order to be in compliance with the EPA regulations, there were two options for the city — to renovate the existing plant or to build a new plant on a new site.

"A feasibility study and cost analysis was the next step," Swayze said. "It was evident after the study that a new plant would be cheaper."

Total project costs, which includes planning, design and construction is estimated at \$10.2

Carbondale water treatment plant's new air stripper

William Mulcahy/Daily Egyptian

million. Renovations would have cost an estimated \$2 million more. Construction having started in January 1992, the plant is 50 percent completed.

A new water and sewer equipment storage building will be constructed adjacent to the plant. The old city reservoir's spillway will be reconstructed in order to provide a readily available backup water supply as required by law.

The new water treatment plant is planned for completion in early 1994 in the Southwest corner of the old city reservoir area. It will facilitate the city of Carbondale, SIUC, South Highway, Crab Orchard, and Lakeside water district.

The new water treatment plant is designed to treat eight million gallons a day (8 MGD), and can be doubled in handling capacity in the future, if the need arises.

SIUC not as quick as Illinois to further energy conservation

By Jonathan Senft
Special Assignment Writer

Although SIUC often follows in the footsteps of the University of Illinois, in the area of energy conservation, SIUC is not quite as fast.

Because of the potential for President Clinton's energy tax hike, U of I has taken an administrative step to curtail the excessive use of energy. Among other steps, employees are being asked to turn off computers when not in use and switch off lights as they leave a building.

Illinois is also spending dollars to increase the efficiency of their buildings. Administrators hope to invest \$500,000 in renovations to make the structures more energy efficient.

SIUC has made some of its own significant efforts.

Mark Scott, building automation technician for the SIUC physical plant, said that SIUC has a contemporary system for energy conservation called the energy management system.

"The system monitors 26, mostly academic buildings, on

campus," he said. "It monitors energy units including fans, heating and water pumps. The system is designed to run for 45 minutes and shut off for 15 minutes per hour."

The energy management system limits the SIUC demand for energy, Scott said. If the energy goes down, then the bill from CIPS is less. SIUC's bill for March was over \$331,000.

"Usually in the summer they can be even higher," Scott said. "CIPS increases the amount per kilowatt in warmer months."

Scott said that last year the bills were cheaper. This could be because of increased rates from CIPS or an increase in SIUC's power usage, he said.

Ed Schott, a member of the Student Environment Center, said that so far, there has been little effort from administration, as well as students in conserving energy on campus.

Harrell Leach, superintendent of building maintenance said that in the past five years, besides the energy management

RECYCLING, from page 1A

"To recycle plastic, you usually have to ship it a few hundred miles. This creates a cost," she said. "The number of places which take plastic for recycling have decreased, because now it is cheaper to make new plastic than to recycle it."

Spader said the items most recycled depend on what pays the most.

"Aluminum is the most profitable, but the price has also gone down since the collapse of the former Soviet Union; they flooded the recycling market," she said. "After aluminum comes white office paper and clear glass. These are both very popular."

Locally, Carbondale has the only large scale recycling effort known as "curbside pick-up," and an organizer for the event says it has

been successfully.

"The program started in 1990 and weekly about 28 to 38 percent of the people recycle," said Wayne Wheelers, environmental services manager for Carbondale. "On a monthly basis that increases to about 45 percent."

With a greater emphasis being placed on the importance of recycling the question remains — what can be done to encourage people to recycle?

Southern Recycling Center has taken steps to increase awareness regarding what types of materials can be recycled at their facility.

"We have printed materials that we have made available to the public," said Karayiannis. "We also have information in the guide from Carbondale Clean & Green."

UNIVERSITY, from page 3A

with recycling projects. The University's physical plant has been recycling leaves for about 10 years. The compost site is located between Evergreen Terrace Road and Stone House, said superintendent of grounds Bruce Francis.

The compost is used for campus landscape plans and to add organic matter to soil.

"When we need it, it's wonderful stuff," Francis said. "It increases each year to the point where it has almost become a liability, though. We can't use it as fast as it accumulates."

More than 115 tons of grass

and leaves were recycled in 1992, Tyrrell said.

If SIUC is to win the recycling race, problems it must face are educating students on recycling and finding markets that will accept the garbage that accumulates.

"A major difficulty is changing people's attitudes with recycling," Capie said.

For the most part, however, students have been cooperative, Bullner-Ross said.

"It appears that the students want this," she said. "But we have to educate everyone to let them know that there's a problem."

ENERGY, from page 3A

system, there has been no efforts to conserve energy like U of I.

"The problem of energy wasting is getting ridiculous," he said. "The library lights are left on all night, and the dorms are leaving lights on over the breaks."

The Student Environment Center is taking steps to help the situation out, however. Starting next fall they will introduce the "Living Lightly" program.

The program is designed to speak with students to help them get a better understanding why energy conservation is important. "Living Lightly" will concentrate mainly on conservation in living areas.

CLINTON, from page 1A

concerns about the endangered species in the forests.

"I'll never forget what I've heard today, the stories, the pictures, the passion from all of you. In a funny way, even when you were disagreeing, everyone of you was a voice for change," Clinton said. "Everyone of you was saying we can't possibly do any worse than to stay within the framework which has now undermined our ability to work together and to build a sense of common community."

Badger said the forest summit was an important step for Clinton to make.

"I was really impressed with the timber summit. (Clinton) did a really good job of

hearing all sides of the issue and got people to talk about it," he said. "I see a lot of progress coming out of it."

Although Clinton's proposed budget focused mainly on deficit problems and health care issue, Badger said he is not concerned that the environment will be overlooked.

"One of the most important environmental issues is the quality of life," he said. "If people are provided better health care, then they will be freed up to pay attention to environmental concerns. If people are worried about insurance costs, they won't be concerned about the environment."

COMMISSION, from page 1A

will be needed. At this time the Southern Illinois regional landfill has the capacity to accommodate six years of waste disposal.

"After analyzing the figures the commission will establish a citizens advisory group and hire a consultant," Newton said. "We will meet, consult and make recommendations, which will go before the

city board."

Newton said the current problems people face when trying to recycle plastic products will have to be dealt with.

"Right now the best way to deal with this crisis is to buy recycled plastic in the stores," he said.

Recycled plastics are usually those which are black in color.

SIERRA, from page 2A

about strategies and discuss their outings. The outings include educational and social interaction with members. They have traveled to local forests to study the environment and to socialize.

"We are very active with the community," Cook said. "We hope to stay that way."

Another project the Sierra Club has played a major role in is the Sugar Creek city lake project. It has been blocked since 1990 on a state and local level.

Sugar Creek is a small area outside of Marion, near Creal Springs, which hosts different native plants and animals. The Sierra Club has tied up the lake plans by pushing for environmental and legal paper work with the Army Corps of Engineers and the state because of the Wetland Protection Act.

In the Spring 1991, the Sierra Club held a town meeting at Marion High School gym where citizens voiced their opinions.

"It was a interim success for us," Cook said. "It is not over yet."

The Sugar Creek lake project is still

tied up in legal paperwork.

The city of Marion has spent millions of dollars just to get approval from Army Corps of Engineers and the state.

The project still is alive but has been put on hold with some difficulties.

The club won a \$50,000 U.S. Environmental Protection Agency grant for their "Swamp Squad" groups who have become a watch dog group in central Illinois. The groups used the grant to map and take inventory of the area.

The Sierra Club gets involved in recycling projects, toxic issues and farming issues in Illinois.

"People are attracted with the Sierra Club for programs and outings but not political and conservation issues at first," Toussaint said.

"They begin to realize the places they enjoy are threatened and they get that emphasis to get more involved," she added. "We do get involved with other environmental groups on different cases. There are different levels of membership."

Earth Day inspires changes

Businesses, consumers work together to clean environment

The Baltimore Sun

Jennifer Smith cleans her floors with a solution of vinegar, baking soda, hot water and a dash of ammonia.

She buys recycled toilet paper and no paper towels. Her kitchen faucet and shower head are equipped with an aerator that limits water flow.

Ms. Smith recharges household batteries with a solar charger, uses a clothes line instead of a dryer and covets a non-electric floor sweeper offered in the Real Goods catalog of "products for energy independence."

And she never buys anything that is heavily wrapped in plastic and cardboard.

For Smith, living an environmentally-sound life means being an informed and modest consumer. "I'm a very conscientious buyer," said the senior manager for education at the Chesapeake Bay Foundation.

In her total commitment to the environment, Smith probably is atypical. But today, millions of American consumers share the spirit, if not the letter of Smith's dedication.

Thursday, the 23rd anniversary of Earth Day will be celebrated. It only has been in the past four years, however, that consumers, alarmed by the Exxon Valdez oil spill, ozone depletion, acid rain and other eco-emergencies, have taken Earth Day's year-round mantra — reduce, reuse, recycle — to heart.

"We're seeing that the environment is having a tremendous impact on consumer behavior," said Anthony Casale, president of American Opinion Research, the parent company of Environmental Research Associates in Princeton, N.J.

In a recent Advertising Age study,

for example, 73 percent of those surveyed said environmental marketing claims sometimes or often affected their buying decisions.

Business — from thriving entrepreneurs creating new products less harmful to the environment, to Fortune 500 companies that are retooling huge industrial plants to cut pollution — is responding in kind.

In the first half of 1992, 11.4 percent of new products marketed in the United States made green claims, according to an Environmental Protection Agency report on environmental marketing terms.

"I honestly believe green thinking is becoming a fact of life, in both big and small business ... not only because it's socially responsible; it's going to be good business," said Norman Dean, president of Green Seal, a non-profit labeling program for household products based in Washington.

Today, a staggering array of items claim to be biodegradable, non-ozone depleting, non-petroleum based, unleached and recycled.

Giant "eco expos" throughout the country showcase biodegradable pens, synthetic textiles fashioned from plastic soda bottles, organic clothing and shoes made from recycled rubbish.

Mainstream manufacturers and retail chains establish in-house environmental initiatives, tout their own "green" products and form alliances with environmental watchdog groups. Many food companies now sell products made from ingredients gently harvested from the South American rain forest.

In 1992, the green mail order catalog industry reaped \$38 million, pitching everything from laundry powder, deodorant crystals and

enviro-toothbrushes to necessities for living off the utility grid, according to Carl Frankel, editor and publisher of GreenMarket Alert, a Connecticut newsletter that tracks green industries.

And here and there, environmental boutiques, such as Environmentally Sound Products in Towson, Md., and Blue Planet in Boston, are cropping up.

Young people, beneficiaries of environmental education programs missed by their parents, are the best customers for environmental products, Casale says.

Discriminating consumers, overwhelmed by competing claims of environmental friendliness, may refer to scores of books, like "Shopping for a Better World: The Quick and Easy Guide to Socially Responsible Supermarket Shopping," published by the Council on Economic Priorities.

In 1992, the Federal Trade Commission developed guidelines for companies that make fuzzy environmental claims, like "environmentally friendly," "crucially free" and "biodegradable." So far, the FTC has taken action against 20 companies, including Mr. Coffee, which allegedly claimed falsely that its filters were "cleaned and whitened without using chlorine bleach," an environmentally unfriendly material.

New labeling programs, such as Green Seal and Scientific Certification Systems, which set environmentally safe standards for products, also will help consumers discern between what Carl Frankel of GreenMarket Alert calls "greened up" versions of established products and "deep green" products that actively enhance the environment.

Opposition expected at gay march

The Washington Post

As Eugene Delgaudio sees it, someone has to show up to oppose the huge crowd expected at Sunday's homosexual rights march on Washington. And so far, he is the only one to ask for a permit from the National Park Service to do just that.

Delgaudio, executive director of the Public Advocate for USA Inc., said he and about 25 supporters will be downtown Sunday afternoon, holding banners and posters that proclaim opposition to allowing homosexuals in the military, as teachers and in government.

"My goal is to focus on the hypocrisy of their political demands," said Delgaudio, who described his organization as a conservative citizens action group.

He declined to reveal what the banners will say, but he said the

slogan he used on 1,000 posters during the presidential inauguration was "Protect Our Privates, Armed Forces Forever Straight."

Repealing the gay ban in the military is among the list of official demands by march organizers, who want to extend the protections of federal civil rights legislation to people regardless of their sexual orientation.

But many who oppose gay rights legislation, including lifting the military ban, argue that homosexuality goes against traditional family values. They regard homosexuality as immoral, and they challenge assertions by gay rights advocates who say people are born either heterosexual or homosexual.

Opponents of gay rights say they also worry that having gay soldiers or gay teachers will undermine troop morale and possibly influence

young people to decide to be gay.

Sunday's gathering, which organizers are calling the March on Washington for Lesbian, Gay, and Bi Equal Rights and Liberation, has drawn little in the way of organized protests. But opponents of what critics have called the "gay agenda" say they will be on hand to give interviews, appear on talk shows and send out news releases with their views on the march is over.

Kelly Mallins, spokeswoman for the Traditional Values Coalition, said the group's chairman, the Rev. Louis P. Sheldon, will come to Washington from California "to watch, respond and lobby."

"They have planned this march for two years, and they will probably have a successful event," she said. "We can't take that away from them. But this is educational for us. We will watch and learn."

Giants' Bonds just loves to play game

Newsday

From the table in the middle of the San Francisco Giants' clubhouse, a half-dozen players cooed and wheedled Barry Bonds to dress and join the card game. It was not, he insisted, because he has more money for them to take.

"Hell no," he railed. "They don't take my money."

Two weeks into the season and Bonds has made himself part of this team his own way.

"He brings some of the pride they had in Pittsburgh, that never-give-up attitude," Dusty Baker, the new manager, said.

The Giants are in first place and Bonds, who hit a two-run home run Tuesday night against the Mets, has been all he could be. For him the baseball is precisely what it was in Pittsburgh or would have been in any city.

"The people," he said. "You go with it at a slow pace. I get along very well, as you can tell."

He nodded toward the card game.

What it boils down to, he said, was that performance earned respect. Baker's observation was that Bonds was more student of the game than the manager anticipated.

"What's so amazing?" said Bobby Bonds, father and first base coach. "I've seen him do that stuff in school—in high school, in Little League. Wherever he was, he was so much better than everyone else. He's just grown up in the game."

By Bobby Bonds' measurement, Barry Bonds is 28 years old and has 28 years' experience in baseball. He traveled with his father, beginning with his first and best seasons with the Giants, saw his father traded, saw him in uniforms of eight teams, saw his

father released twice.

"As a kid, you don't know about that," Barry said. "I just wanted to go play Little League. I wanted to know when I was getting my 10-speed bike."

But stuff rubbed off in all those stops and became as genetic memory. He learned a joy of the game.

"Just the satisfaction of the game, playing out there," he said.

He learned a touch of cynicism growing up in all those clubhouses. The joy of the game is in the playing, and the man outside the lines is to be kept to himself.

He measures the advantages he had in having the ballpark for his classroom and the likes of Willie Mays, Willie McCovey and Mickey Mantle for his teachers. "You take it and you listen to what your teachers say," he said.

Most often the lessons were absorbed subconsciously, to be found in the memory bank years later.

"He's seen me released," Bobby Bonds said. "He knows it will happen to everybody in this room. He knows it will happen to him."

Bobby Bonds was a fine player—sometimes a wonderful player. He hit 30 home runs and stole 30 bases in the same season five times. Barry has done it twice. "He might not do it five," the father said. "It's not easy to do."

There was a proprietary interest in the father's tone. Of course, the son has won the Most Valuable Player Award two times, and the father never won it. And the son came home to San Francisco, wearing his father's No. 25, with the largest contract in history. He and Bobby Bonds are "sons" to Bobby Bonds and "brothers" to each other. They thrived as

teammates in Pittsburgh, enjoyed the envelopment of the small market and the nurturing of Jim Leyland, and left. Bonilla squirmed all of last season in New York.

During his personal struggle in the playoffs last season, Barry was teary-eyed at the thought of playing his last games in that city, for that man.

What does he feel for Leyland now? He was asked. "None of your business," Barry said.

He paused.

"I respect him as a manager, and love him as a friend," he said.

The curtain of privacy could be parted just that much. Bonds would like to be understood as a human being with pride and sensitivity, but is unwilling to reveal any of himself beyond the game.

Yet, as much as Bonilla sprang with his status, Bonds struggled to it. Quickly the Giants have seen him waggle his fingers in celebration on the bases. The Giants feel their offense gives them a chance to overtake the Atlanta Braves in the National League West. In the Giants' first homestand of the season, Bonds had 11 hits in 18 at-bats, including five doubles, two homers and nine RBI.

He was 9 for 14 as they won 3 of 4 against the Braves. "He is not afraid of accepting the responsibility of being best," Baker said. "A lot don't want it."

Perhaps it's a link between privacy and loneliness that Bonds draws for himself.

"I just like playing baseball," Bonds said.

He gives the game effort. He accepts his role. He mocks himself for the failure of the Pirates to win the World Series the last three

seasons. His ambition is simple: "Win a World Series. I'm tired of going to the playoffs and getting my butt kicked."

He does not hide from the fact that he didn't lead his team to the prize.

"How can I do this for 162 games and disappear for seven?" he asked. He acknowledged that he asked himself if he had let his teammates down.

"You go through that," he said. "You're human."

Then the thought was to be driven out. Time to go onto the field. Standing at the batting cage was Bonilla—the friend, the brother—with his back turned. Bonds quietly approached from behind and planted a swift kick to the seat of Bonilla's pants.

The pleasure is all Bonds'.

Tigers beat Texas, 5-4

Zapnews

Rob Deer hit a pair of home runs and threw out the potential tying run at the plate in the ninth inning to lead the Detroit Tigers to a 5-4 victory over the Texas Rangers.

Deer started the scoring with his fourth home run in the second inning. It became a 2-0 lead the following frame on an Alan Trammell groundout. After Texas had cut the advantage in half, deer came back with a two run homer in the sixth.

Deer went 3 for 4.

leading off the All-Star Game. A 90-yard sideline sprint on "Monday Night Football."

Two stars, one person.

He thrived on a single sentence: "You can't do that." Can't play two sports. Can't have your cake and eat it, too. Can't start ringing up 100-yard games after skipping the first half of the season. Can't spend the baseball winter in shoulder pads instead of in a batting cage looking at curveballs.

To all that skepticism, Jackson offered performances and accomplishments that said simply: "Yes, I can."

But then he got hurt and contracted a bone disease and wound up with an artificial left hip, and it turns out all that other stuff was just the opening act. There had been other two-sport stars, after all. Bo wasn't the original. But a major-leaguer with an artificial hip? Get serious. All together now: You can't do that.

"Have you set any goals for the season?" someone asked him Tuesday in the batting practice shadows.

"I have reached the goal that I had set," Bo said.

He has proved everyone wrong. Doctors. Therapists. General managers. Sportswriters. The war is over. Bo has won. He has made it back to the majors with a plastic hip. He has quashed the notion that there is anything in the world, anything, that he can't do. What if he said he could fly? Wouldn't you hesitate before you said no?

"How hard did you work to make it back?" someone asked.

"If you combined all the years that I'd been playing sports," Bo said, "and compacted it into a year, that's it. Twenty-three years compacted into one. That's how hard I worked."

It was a 24-hour job. There was a certain way he had to sleep. A certain way he had to walk. A certain way he had to take a shower. A certain way he had to get in a car.

When it rained or snowed, he couldn't go outside. Then there were hundreds of hours of therapy and workouts, building up muscles, developing coordination, a solitary obsession.

"I always knew I could make it back," he said.

"I knew it even before the operation. And I especially knew after the operation, when my kids started using me as a human sled."

Now the circus is turned around. Now everyone else is obsessed with his hip, and he's on to the next item on his agenda, whatever that may be.

He's finished with the hip. He has made it back.

He has hit the fairy-tale homer in his first at-bat. He still has to work out every day, but he did that, anyway. The hip? It's fine. And yours?

"Maybe it's amazing to some people, but not to me," he said.

"I don't even think about it. I can slide on it. Whatever. I can't run as fast as I used to, but I can still outrun anyone standing here with a microphone. It's just not that difficult."

DRAFT, from page 16

Rams need a running threat to take the heat off Jim Everett. Betts would be an ideal fullback in Coach Chuck Knox's attack. Remember, Knox has drafted a fullback before in the first round—John L. Williams, with the Seahawks.

11. Cleveland Browns: Wayne Simmons, OLB, Clemson. The Browns are getting old at linebacker, and Simmons is the best one available after Jones. Simmons has speed and athletic ability.

12. Los Angeles Raiders: Patrick Bates, S, Texas A&M. Ronnie Lott has fled to the Jets, so it's essential to replace him with a big-time player. Bates has size, speed and athletic ability.

13. Bengals (trade from Eagles): Tom Carter, CB, Notre Dame. The secondary is hurting over the loss of free-agent cornerback Eric Thomas to the Jets. The Bengals need a speedy cover man, and Carter fits the bill.

14. Denver Broncos: Curtis Conway, WR, Southern Cal.

The Broncos can't believe their luck here. They might have gone for Cal's Sean Dawkins, but Conway has speed and is an explosive return man.

15. Green Bay Packers: Brad Hopkins, C, Illinois. The Packers are filling plenty of needs but still could use a quality lineman such as Hopkins, who also can play guard.

16. Indianapolis Colts: Natrone Means, RB, North Carolina. The Colts would love Betts, but Means is the next big back available, and that's what they need. Means (5-10, 250 pounds) is built like Betts and is capable of carrying the load. If quarterback Jeff George doesn't get a running or receiving threat here, it's a shame.

17. Washington Redskins: Carlton Gray, CB, UCLA. Darrell Green is not getting any younger, and there's a need on the side of the secondary. Gray has good athletic ability, and is smart enough to learn Richie Petitbon's complex scheme.
